

Ahmed Muhumed

IT Support Specialist | Cybersecurity Analyst | Cloud Security Professional

Halifax, Nova scotia | 902 930 4775 | muktaar873@gmail.com | LinkedIn: [Ahmed](#) | portfolio: [Ahmed](#)

Professional Summary: IT Support and Cybersecurity professional with three years of experience supporting end users, maintaining IT systems, and monitoring security events. Skilled in troubleshooting hardware, software, account, system, and network issues across Windows and Linux environments. Experienced in reviewing logs and network activity, investigating security alerts, performing vulnerability assessments, documenting incidents, and escalating threats based on severity and business impact. Microsoft SC-200 certified with CompTIA Security+, SSCP, CC, and Azure Fundamentals certifications. Known for effective problem-solving, clear communication, teamwork, and a strong commitment to maintaining secure and reliable IT operations.

Tech Stack & Skills

Languages: SQL, Python, PowerShell Scripting

Operating Systems: Windows, Android, iOS, Mac OS, Linux

Security Tools: FortiGate, FortiOS, FortiAnalyzer, FortiGuard Labs, FortiManager, FortiClient, Wireshark, Network security, Firewall Administration, FortiCare, FortiCloud, NAT, IDS/IPS (Intrusion Detection & Prevention) & Web filtering, VPNs (IPsec, SSL), MITRE ATT&CK Framework, Playbooks & Runbooks, Access controls, Network monitoring and logging (SIEM), TCP/IP, DNS, DHCP, VLANs, Routing & Switching, Microsoft Sentinel, Microsoft Defender XDR, Microsoft Defender for Endpoint, Microsoft Defender for Office 365, Microsoft Defender for Cloud, Microsoft Entra ID, Azure Log Analytics, Kusto Query Language (KQL), Microsoft Purview, and Security Copilot. Splunk, Wireshark, Nmap, Nessus, OpenVAS, VirusTotal, YARA

Applications & Tools: Microsoft Excel, Active Directory, FortiSandbox

AI Fundamentals: Prompt Engineering & Output Evaluation, Creating responsible generative AI solutions, AI for deep packet inspection, URL filtering, and AI-driven malware prevention.

Project Management Fundamentals: Agile, Waterfall, Scrum, Kanban, Trello

Skills: Information security, Malware Analysis, Network Monitoring, Threat Detection, Threat analysis, Incident Response, Vulnerability management, Security policies & compliance, Cloud compliance & best practices, Time Management, Problem Solving, Teamwork and Creativity

EDUCATION

Jomo Kenyatta University of Agriculture and Technology (JKUAT)

December, 2023

Bachelor of Science in Information Technology

Nairobi, Kenya

(Assessed by WES as equivalent to a Canadian bachelor's degree)

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Security Operations Analyst Associate (SC-200)
- CompTIA Security+ ce (SY0-701) – CompTIA
- Systems Security Certified Practitioner (SSCP) – (ISC)²
- Certified in Cybersecurity (CC) – (ISC)²
- Fortinet Network Security Expert (NSE) 1 and 2
- CompTIA Cybersecurity Analyst (CySA+) - in progress

WORK EXPERIENCE

Personnel support worker

Nov. 2023 - Sept. 2025

Macleod group | Mahone bay, Nova scotia

- Tracked changes in client status and progress, helping the care team respond to changing client needs.
- Documented services provided and client progress in logbooks and reports, ensuring clear and accurate care records.
- Updated client care information with the care team, helping keep individual care plans current and consistent.
- Shared client progress and concerns during case reviews, helping the team make informed care decisions.
- Helped clients stay connected with loved ones through written and verbal communication, supporting ongoing family connections.
- Worked with interdisciplinary team members on individual care plans, supporting coordinated care across the team.

IT Operations Analyst

Aug. 2020 - Jun. 2023

Samaha Technologies | Nairobi, Kenya

- Applied operating system and application updates across 30+ endpoints to reduce exposure to known vulnerabilities.
- Documented security incidents, technical issues, findings, and resolution steps to maintain accurate records and support future investigations.
- Escalated high-priority technical and security incidents to appropriate teams based on severity and business impact, supporting timely incident response.
- Supported 50+ users with hardware, software, accounts, and connectivity issues, helping maintain reliable day-to-day IT operations.

- Monitored 50+ endpoints and critical IT services for performance, availability, and security issues, helping identify problems before they disrupted users.
- Performed vulnerability scans across 30+ endpoints to identify security weaknesses and prioritize remediation activities.
- Investigated 10+ security alerts weekly by reviewing logs, network activity, and indicators of compromise to determine potential security incidents.

IT Support Technician

Jan. 2017 - Aug. 2018

Windle International Kenya | Dadaab, Kenya

- Installed operating systems, business applications, antivirus software, and device updates across 30+ workstations to maintain secure and reliable systems.
- Set up computers, user profiles, software, and network access for new users to ensure systems were ready for productive use.
- Handled password resets, account access, and permission issues for 50+ users to maintain secure and uninterrupted access to IT resources.
- Diagnosed TCP/IP, DNS, Wi-Fi, and LAN connectivity problems to restore access to network resources and business services.
- Resolved 15–20 user support requests weekly involving hardware, software, login, and connectivity issues to restore normal operations.
- Supported 50+ users with day-to-day technical issues, providing timely assistance across Windows systems and business applications.

CYBERSECURITY PROJECTS

Microsoft Sentinel SOC Honeypot Lab | Azure, Microsoft Sentinel, Log Analytics, KQL

Github link: [Microsoft-Sentinel-SOC-Honeypot-Lab](#)

- Deployed an internet-facing Windows virtual machine in Microsoft Azure to simulate a honeypot environment.
- Connected Windows security logs to Microsoft Sentinel for centralized monitoring and investigation.
- Created KQL queries to identify failed sign-ins, suspicious IP addresses, and potential brute-force activity.
- Investigated security events and mapped detected behavior to relevant MITRE ATT&CK techniques.

Splunk SIEM Security Monitoring Lab | Splunk, Sysmon, SPL, Windows Logs

Github link: [splunk-siem-soc-lab](#)

- Ingested and analyzed security data using Splunk to identify suspicious endpoint and network activity.
- Developed SPL queries to investigate brute-force attempts, malware activity, and indicators of compromise.
- Created dashboards and alerts to visualize security events and support threat detection.
- Documented investigation findings and recommended incident-response actions.

Vulnerability Assessment and Remediation Lab | OpenVAS, Nessus, Nmap, Windows 11

Github link: [Vulnerability-Management-and-Threat-Exposure-Analysis](#)

- Performed authenticated vulnerability scans against a Windows 11 virtual machine in a controlled lab.
- Identified outdated software, insecure configurations, exposed services, and known vulnerabilities.
- Prioritized findings according to severity, potential impact, and remediation requirements.
- Applied security updates and configuration changes and conducted follow-up scans to verify remediation.

Phishing and Malware Analysis Lab | VirusTotal, YARA, Ghidra, PESTudio

Github link: [Phishing-Email-and-Malware-Analysis-Sandbox](#)

- Analyzed suspicious emails, attachments, URLs, and malware samples in an isolated environment.
- Examined file properties, strings, hashes, imports, and behavioral indicators to identify malicious activity.
- Extracted and documented indicators of compromise, including domains, IP addresses, URLs, and file hashes.
- Developed basic YARA rules and documented recommended containment and response actions.

APT41 Threat Intelligence Research | Threat Intelligence, MITRE ATT&CK, IOCs, Threat Hunting, Splunk

Github link: [Deep-Research-on-Threat-Intelligence-and-APTs](#)

- Researched APT41 threat-actor operations, targeted industries, malware families, attack techniques, and command-and-control infrastructure.
- Mapped APT41 tactics, techniques, and procedures to the MITRE ATT&CK framework and documented relevant IP addresses, domains, and file hashes.
- Developed detection and defensive recommendations using threat-intelligence feeds, SIEM monitoring, IOC enrichment, and Splunk SPL queries.
